EDUCATION

FATEC ITAQUERA - PROF MIGUEL REALE
CROSS-PLATFORM SOFTWARE DEVELOPMENT BACHELORS

January 2023 - December 2025
Sao Paulo,Brazil

EXPERIENCE

FATEC ITAQUERA | FRONT END INTERN DEVELOPER Sao Paulo,Brazil | September 2023 – August 2024

- Reduced loading time by implementing a Single Page Application(SPA) from scratch, which led to a **31%** faster loading.
- Made the navigation substantially faster by implementing Memoization techniques on contents of the website, which reduced navigation time between pages to less than **100ms**.
- Reduced the time for content to become visually displayed during page load by implementing asynchronous content loading, which led to a **47%** increase in Speed Index benefiting **User Experience** and lowering **Bounce Rates**.

FATEC ITAQUERA | BACK END INTERN DEVELOPER Sao Paulo,Brazil | September 2024 – December 2024

- Implemented a **microservices architecture**, which led to a more flexible structure of code in the project
- Worked on a team of **10** developers to implement a new architecture and make it more flexible for future changes

SKILLS

PROGRAMMING LANGUAGES	JavaScript, Java, TypeScript, Kotlin
LIBRARIES/FRAMEWORKS	SpringBoot, React, React Native, KMP
TOOLS / PLATFORMS	Git/Github, AWS, Google Cloud, Docker
DATABASES	MongoDB, SQL

PROJECTS / OPEN-SOURCE

WEBSITE FATEC ITAQUERA

HTML, CSS, JavaScript

- Collaborated with a team of **7** developers to modernize the website, focusing on high performance and information architecture.
- As I was limited to using only HTML, CSS, and JavaScript without the assistance of any library or framework, I created and implemented an end-to-end custom **single-page application (SPA)** framework and still achieved high-performance outcomes.
- Using Memoization and Cache techniques, navigation between page contents was reduced to less than **100ms** on average.
- With the implementation of the new version of the website, the results were that the size of the website was **50%** smaller compared to the older version, which allowed the website to fully load **13 seconds** faster than the older version. This led to an increase in **Speed Index**, benefiting the User Experience and reducing Bounce Rates.
